

Fibromyalgia Demystified

Bodywork as a Key Therapy

Cathy Ulrich

Jane had just been diagnosed with fibromyalgia. She was happy to have a name for the mysterious, traveling pain she had felt for some time, but she was still worried about how to deal with it. She'd done research on the Internet, but the information left her more confused. "There are so many causes and ways to treat it," she said. "I don't know what to do." A friend of Jane's recommended massage as part of her treatment plan. "She said it helped her," Jane said, "so I'm willing to try."

For fibromyalgia sufferers, muscle pain, tightness, and general body discomfort can all too often become a way of life. But what is fibromyalgia, and what can be done to help?

Theories about the cause of fibromyalgia include thyroid imbalance, sleep disorders, genetic predisposition, allergies, trauma--especially whiplash injuries--and possibly even viruses. Many who have fibromyalgia syndrome have other conditions as well, including depression, irritable bowel syndrome, chemical sensitivities, intolerance to exercise, restless legs syndrome, extreme sensitivity to cold, and seasonal affective disorder.

Factors At Play

Jay Goldstein, MD, a leading researcher and clinician, identified three common factors in people who are susceptible to fibromyalgia. It's helpful to consider

from a good
mood.*

Bodywork can ease the pain of fibromyalgia, helping people improve their quality of life.

What is Fibromyalgia?

Fibromyalgia, which literally means "connective tissue muscle pain," causes severe tenderness in multiple points throughout the body as well as persistent fatigue, morning stiffness, and non-refreshing sleep. Fibromyalgia is found in about 2 percent of the adult population, and women are five to seven times more likely to have it than men.

these factors when planning a treatment approach:

1. Biochemical factors, such as hormonal disturbances, allergies, frequent colds and viruses, and nutritional deficiencies.
2. Biomechanical factors, such as

congenital deformities (one leg longer than the other or scoliosis, curvature of the spine) or functional conditions (poor posture, overuse syndromes, or poor breathing patterns).

3. Psychosocial factors, like depression, anxiety, or difficulty coping with stress.

Bodywork Can Help

Fibromyalgia is best treated using a multidisciplinary approach, and bodywork can be a key part of healing, recovery, and management. Depending on your specific needs, any or all of the following methods may be helpful.

Swedish Massage

Because stress is such a strong component of fibromyalgia, regular massages for relaxation and stress reduction can be beneficial to your program. Swedish massage is the foundation of training for most massage therapists. Its primary goals are to gently relieve muscle tension, improve circulation, and restore the balance between mind and body.

Rolfing

This whole-body approach is designed to restore postural alignment and ease. Rolfing--and other related forms of bodywork under the umbrella of structural integration--helps to free soft tissue tightness and remove the structural imbalances that create stresses and strains on the body, restoring biomechanical function. Whiplash and other types of neck injuries are commonly seen in fibromyalgia cases. Rolfing aligns the body so the head and neck can rest more easily.

Lymphatic Massage

The lymph system is the body's primary way of eliminating waste at the cellular level. When the lymph system is backed up, tissues can get bogged down and become irritated, inflamed, and swollen. Biochemical disturbances are a key factor in fibromyalgia, so restoring the mechanical function of the lymph system can be important. Lymphatic massage is a specific form of therapy designed to improve circulation, remove waste, and reduce swelling in the tissues. It's often a good way to start a bodywork session.

Neuromuscular Therapy

Trigger points--pivotal body points that

hold and release pressure--become small areas of extreme tenderness and tightness for fibromyalgia patients. Neuromuscular therapy is a specific form of bodywork designed to free these trigger points along with the fiber in the surrounding tissues. Neuromuscular therapy encompasses many different techniques, but the system is designed to relieve the tightness in the deep soft tissues and to eliminate trigger points.

Considerations

Sensitivity to touch varies greatly for fibromyalgia patients. Some people prefer very deep work, while others are sensitive to the lightest pressure. It's important that you establish good communications with your massage therapist so you can explain what feels comfortable to you and what doesn't.

When you're in an acute flare-up, limit your bodywork to more gentle

techniques. When you're feeling better, deeper work intended to eliminate trigger points or work on posture may be more appropriate. Partner with your therapist to find the best approach.

You may be sore after a session. A moderate level of soreness can be expected, but should only last about forty-eight hours as your body adapts to the changes. If it lasts longer or is more severe, bodywork may be too aggressive or the session may be too long. Start out slowly, learn what works best for you, and let your therapist increase the time or intensity as you progress.

Fibromyalgia is a soft tissue condition, and bodyworkers are experts at working with soft tissues. By including massage in your care, you can expect to manage and improve your fibromyalgia.

Free yourself from the often debilitating discomfort of fibromyalgia and take back your life.

No Pain, No Gain?

Bodywork Doesn't Have to Hurt to be Effective

Cathy Ulrich

Some people believe massage must be painful to be effective. While some modalities may be intense, this doesn't necessarily translate to a knuckle-biting experience. In fact, painful bodywork can be counterproductive. If you can't breathe comfortably, want to tighten up, make a face, or curl your toes, the technique is too much for you. Your body will go into a protective mode and actually block any positive change.

"No pain, no gain" just doesn't have to apply when it comes to bodywork. Be sure to provide feedback to your practitioner so that you're on the same page. Think of it as a "scale of intensity." On my scale, zero is not touching you and ten is pain--not the worst pain you've ever felt but the place where you want to hold your breath, tighten up, make a face, leave your body. That's a ten.

You shouldn't ever have to be in a pain range to get results, and be sure to let your practitioner know if you're in an

eight or nine range. They may stay at that level if that's where the therapeutic value will be attained, but again, only if it's manageable and you're not tightening up.

And every single client is different. Not only do individuals all start in different places, but their bodies respond differently, and their pain thresholds are extremely varied. What one person finds heavenly, another calls torture.

If it does feel too painful, be sure to tell your therapist. Usually, a practitioner can simply slow down to ease the intensity without losing therapeutic value. Sometimes, if you are nervous or stressed, just remembering to breathe will make your body more open, and you'll remain comfortable.

Bodywork needn't be a test of how tough you are. By giving your therapist appropriate feedback and understanding that painful techniques aren't really helping your body heal, you'll have a

great experience in the session and feel better afterward.

Therapeutic massage actually feels good.

Massage for Old Injuries

Ancient Injuries Don't Have to Make You Feel Old

Art Riggs

Injuries such as chronic back pain, trick knees, and sticky shoulders are not necessarily something you just have to live with. Massage techniques might hold the key to unlocking this old pain.

Will Massage Help?

The benefits of massage will depend on the extent of the injury, how long ago it occurred, and on the skill of the therapist. Chronic and old injuries often require deeper and more precise treatments with less emphasis on general relaxation and working on the whole body. Massage works best for soft tissue injuries to muscles and tendons and is most effective in releasing adhesions and lengthening muscles that have shortened due to compensatory reactions to the injury. Tight and fibrous muscles not only hurt at the muscle or its tendon, but can also interfere with proper joint

movement and cause pain far away from the original injury.

Therapists who perform such work often have specialized names for their work--such as orthopedic massage, neuromuscular therapy, myofascial release, medical massage, etc.--but many massage therapists utilize an eclectic approach combining the best of the specialties.

It Works!

A recent Consumer Reports article ran the results of a survey of thousands of its readers and reported that massage was equal to chiropractic care in many areas, including back and neck pain. Massage also ranked significantly higher than some other forms of treatment, such as physical therapy or drugs.

If that nagging injury persists, consider booking a massage. Be sure to discuss the injury with your practitioner: How did you receive the injury? Have you reinjured it? And what exactly are your symptoms? Often, the body compensates in one area to protect another that has been traumatized, and this can create new problems.

Discuss the issues with your massage therapist. (Sometimes just talking about old injuries can play a significant role in the healing process.) Together, the two of you can work to determine a treatment plan.

Acupuncture is now available at your wellness studio!

We warmly welcome Mike to Deep Roots Massage!

Mike is a nationally certified Acupuncturist and Oriental Medicine practitioner with specialized training in Sports Medicine and Orthopedic Acupuncture. Wholly dedicated to bringing this 2,000 year old art form of integrative medicine to the Bay View community, he uses advanced therapeutic techniques that encourages the body's natural healing response to treat pain, dis-ease and illness caused by imbalances. Mike lends his compassionate ear and heart to deeply listen to a client's concerns, goals, and questions to carefully develop a personalized treatment plan that gets to the root of any underlying source of the ailment being experienced. Gentle and focused in his approach, he provides a sense of trust and strong desire to alleviate perceived suffering. His cool, blue aura is simply calming to be around and will instantly put you at ease, making you feel comfortable and secure during treatment. In addition to acupuncture, Mike offers accessory treatments such as fire cupping, gua sha, electro acupuncture, tui na and nutrition counseling.
